Copo Camaro Nov 22 2021 "The COPO Camaro was ushered into existence in the late '60s by Chevrolet dealers who were installing big-block engines in Camaros and taking them racing. Chevrolet management knew a good thing when they saw it and, tapping into GM's Central Office Production Order (COPO) system, began to outfit stock Camaros with essentially Corvette drivetrains. Then, upping the ante in 1969, Chevy built just 69 super-high-performance COPO Camaros with aluminum-block engines and they became instant classics. The result was a performance configuration that made history. Now, more than four decades later, Chevrolet has recreated the magic by building 69 2012 COPO Camaros intended for sportsman class drag racing competition. ... This behind-the-scenes story puts the new COPO Camaro into historical context and provides specifications for every one of the 69 units created."--Publisher's description.

Muncie 4-Speed Transmissions May 17 2021 The Muncie 4-speeds, M20, M21, and M22 are some of the most popular manual transmissions ever made and continue to be incredibly popular. The Muncie was the top high-performance manual transmission GM offered in its muscle cars of the 60s and early 70s. It was installed in the Camaro, Chevelle, Buick GS, Pontiac GTO, Olds Cutlass, and many other classic cars. Many owners want to retain the original transmission in their classic cars to maintain its value. Transmission expert and veteran author Paul Cangialosi has created an indispensable reference to Muncie 4-speeds that guides you through each crucial stage of the rebuild process. Comprehensive ID information is provided, so you can positively identify the cases, shafts, and related parts. It discusses available models, parts options, and gearbox cases. Most important, it shows how to completely disassemble the gearbox, identify wear and damage, select the best parts, and complete the rebuild. It also explains how to choose the ideal gear ratio for a particular application. Various high-performance and racing setups are also shown, including essential modifications, gun drilling the shafts, cutting down the gears to remove weight, and achieving race-specific clearances. Muncie 4-speeds need rebuilding after many miles of service and extreme use. In addition, when a muscle car owner builds a high-performance engine that far exceeds stock horsepower, a stronger high-performance transmission must be built to accommodate this torque and horsepower increase. No other book goes into this much detail on the identification of the Muncie 4-speed, available parts, selection of gear ratios, and the rebuild process.

American Multinationals and Japan Jan 01 2020 "This pioneering study of United States direct investment in Japan will interest academic specialists, business managers, and government policymakers in America, Japan, and elsewhere. Drawing on rich historical materials from both sides of the Pacific, including corporate records and government documents never before made public, Mason examines the development of both Japanese policy towards foreign investment and the strategic responses of American corporations. This history is related in part through original case studies of Coca-Cola, Dow Chemical, Ford, General Motors, International Business Machines, Motorola, Otis Elevator, Texas Instruments, Western Electric, and Victor Talking Machine. The book seeks to explain why a little foreign direct investment has entered modern Japan. In contrast to the widely held view that emphasizes an alleged lack of effort on the part of foreign corporations, this study finds that Japanese restrictions merit greater attention. Many analysts of the modern Japanese political economy identify the Japanese government as the key actor in initiating such restrictions. Mason finds that the influence of Japanese business has often proved more potent than these analysts suggest. This book offers fresh insights into both the operation of the modern Japanese political economy and of its relations with the world economy."

Muscle Car Special Editions May 05 2020 "Get one before one gets you!" Motion Performance's catchy sales pitch for builder Joel Rosen's Phase III Specialty Muscle Cars sums up the escalating performance scene in the late 1960s. Special edition muscle cars were essential to keep pace. Joel and other independent car builders (such as Carroll Shelby, George Hurst, Dick Harrell, Mr. Norm, and Jim Wangers) did what the factories couldn't do: take the muscle car and turn it into a tire-burning monster. Although the Pontiac GTO established the muscle car category in 1964, a host of corporate safety restrictions restrained factories from offering turn-key race cars off the showroom floor. Independent car builders enhanced appearance and amplified performance in an attempt to do what the manufacturers wouldn't. Motion Performance issued a written guarantee: Phase III cars would run 11.5 at 120 mph down the quarter-mile! Some of the most iconic nameplates in automotive history were applied in this era with names that included Cheetah, Black Panther, Royal Bobcat, Super Hugger, Manta Ray, Super Snake, Deuce, Fast Track, and The Machine. How did manufacturers stealthily promote these special edition muscle cars as "halo cars" while pretending not to endorse them? What happened to these innovators when factories assimilated their ideas? It's all covered inside. Muscle car historian Duncan Brown takes us through these special edition muscle cars, their creators, and the behind-the-scenes forces that shaped these wild beasts into legends that left a lasting legacy.

Camaro Special Editions: 1967-Present: Includes Pace Cars, Dealer Specials, Factory Models, Copos, and More Aug 20 2021 Discover a fascinating array of special edition high-performance Camaros written by Chevrolet historian and COPO authority, Matt Avery. It's no secret that Chevrolet designed and built the Camaro in direct response to the runaway success of the Ford Mustang. The Mustang already sold more than a million cars before the Camaro made it to market in the fall of 1966. The wild popularity of this new "pony car" segment surprised everyone, and Chevy knew it had serious ground to cover to catch up. A credit to General Motors, the Camaro charged hard out of the gate, becoming an instant hit. In each of its first three years, it sold almost a quarter million units, causing a decline in sales for the crosstown Detroit rival. While Chevy crafted Camaro variants to please everyone, enterprising hot rodders and performance tuners always took it a step further. Enter the high-octane world of Camaro special editions. Partly in an effort to work around GM's more than 400-ci displacement ban and following the high-revving demands of enthusiasts, numerous Camaro special editions have been produced over the years, becoming some of the most collectible cars of all time. Covered here are not only the factory models such as pace cars, ZL1s, anniversary editions, IROC-Zs, Hot Wheels editions, Z/28s and RS/SS cars but Camaro Special Editions also covers the legendary COPO cars and dealer go-fast specials from builders including Yenko, Nickey, Berger, Baldwin-Motion, Gorries and Dick Harrell. More modern editions will be covered as well with Callaway, SLP, GMMG, Lingenfelter, Hennessey, and more. Detailed information on all of the models from 1967 to today, including build numbers, options, aspects that make them unique, and their collectability, will all be dissected in this fabulous new volume. This book is a must-have item for all Chevy and Camaro lovers.

Chevelle Restoration and Authenticity Guide 1970-1972 Jul 27 2019 The high-water mark of the muscle car era is usually credited as 1970, and for good reason; Chevrolet was now stuffing high-powered 454 engines into Chevelles. Adding a larger displacement above the still-available 396 (402) offered buyers the option to order the most powerful production car of that era. The 1970-1972 Chevelles remain the most collectible of the model to this day. Author and historian Dale McIntosh pairs with restoration expert Rick Nelson to provide this bible of authenticity on the legendary 1970, 1971, and 1972 Chevelle models. Everything about restoring your Chevelle back to bone-stock is covered meticulously, including step-by-step instructions for chassis and interior restoration. Understanding date variances on parts applicable to the build date of your Chevelle is vital to a factory-correct restoration, and including them in this book provides a depth of coverage on these cars that is unequalled. Restoring a 1970-1972 Chevelle back to concours correct takes a certain amount of expertise. Thankfully, Rick and Dale have done a lot of the heavy lifting on the research side. With this authenticity guide, you can be confident that you have all the correct components and options accurately and expertly represented for your stock restoration. These fine details put the Chevelle Restoration and Authenticity Guide 1970-1972 a cut above the rest.

[COPO Camaro, Chevelle & Nova](#) Apr 27 2022 The COPO Camaros, Chevelles, and Novas of the 1960s and early 1970s were the ultimate high-performance GM muscle cars. While few knew about this back channel program at the time, it is now recognized as the origin of GM's top muscle cars. Dedicated Chevy racers and car owners were determined to compete head-to-head with Mopar and Ford at the racetrack and on the street. But in order to do so, they needed to circumvent the corporate ban on racing and resolve the restriction of 400-ci engines in intermediate vehicles. Don Yenko and some other creative individuals recognized the loophole in the COPO (Central Office Production Order) system at General Motors. The COPO program was designated for fleet vehicles such as taxicabs, but at the peak of the muscle car wars it was used to build the ultimate high-performance Chevy muscle cars. Some horrific on-track accidents compelled General Motors to drop out of racing, yet GM did not want to allow Chrysler and Ford to steal the glory on Sundays while they stood on the sidelines. As a result, GM inconspicuously ran the Chevy racing and high-performance program through back channels, and COPO was integral part of the program. Don Yenko became the COPO muscle car program chief architect and champion. He ordered the

Corvair through the COPO program and created the Corvair Stinger to mount a SCCA road race campaign. From these humble beginnings, the road map for creating the ultimate Camaros, Chevelles, and Novas was established. Factory Camaro V-8s came equipped with the 350 small-block or 396 big-block, which had to compete with the Mustang Cobra Jets and Mopar Wedge and Hemi cars. In response, building the big-block Camaro through the COPO program was devised. At the factory, Camaros were fitted with the 396 engines and shipped to dealers where the 427s were installed in the cars. From 1967 to 1969, the factory and dealers installed eight different 427 engines, including the all aluminum ZL1 427. Later on, others used the road map to build COPO Novas and Chevelles to similar spec, with similar results. The COPO performance car program did not end with these muscle cars.
