Theology of the Old Testament Oct 29 2019 "Gustav Oehler's Theology of the Old Testament is helpful to ministers and biblical students due to its subject, its wide range of thought, the thoroughness with which the topics are examined and discussed, and the positive results to which the author arrives. Oehler focuses on the supernatural character and gradual progress of revelation in the Old Testament. He is able to embrace the whole field of Israel's history in its connection with the founding of a kingdom of God among men and weaves the whole into a thorough unity of which the final expression is Christ. The paramount character of the Theology of the Old Testament is the clear exhibition of God's revelation of Himself and the divine manner in which men were educated for the coming of Christ and the truths which He came to teach. In the careful tracing of these thoughts, as revealed in facts and by words in the Old Testament, Oehler has presented the theology of the Old Testament in a form which at one and the same time meets the demands of theological science and the practical wants of the Christian believer. He has produced a work which stands, as Dr. Schaff has said, "at the head of this department of biblical study"--Logos Bible Software.

Sediments in the Tema Harbour (Ghana) Apr 15 2021 Sediment pollution and accumulation in harbours are major environmental issues and studies that advance their solutions are essential for harbour sustainability. This book provides the first comprehensive assessment of chemical pollution in sediments and sediment accumulation rates in the tropical Tema Harbour (Ghana). This book contributes to improving our ability to use an integrated approach involving sediment chemistry and bioassays in one comprehensive assessment of the contamination state of a tropical coastal environment. Whole-sediment toxicity bioassays using the amphipod *Corophium volutator* and the polychaete *Hediste diversicolor* as bioindicators were combined with data on concentrations of total metal and metal binding forms, radionuclides, organochlorine pesticides and polycyclic aromatic hydrocarbons in bottom sediments as well as total metal concentrations in settling silt-clay particles collected by sediment traps to characterise the hazard, risk and impact of sediments from the tropical coastal Tema Harbour.
