Will Miami Survive? Sep 25 2019 This SpringerBrief uses a complexity perspective to integrate risk, finance, and ecological issues in Miami, USA. It focuses on how the modern financial system, particularly the mortgage market, perceives and manages the risk of climate change. Authors Kathleen Sealey, Ray King Burch and P.-M. Binder offer the case study of South Florida to illustrate how landscapes can be either re-purposed to function ecologically when residents relocate or rebuilt to reduce the threat of future flooding, the tools needed to make these decisions, and how financial systems view and influence them. While the need to integrate financial markets into coastal (and environmental) management is increasingly recognized, the difficulty of this task is made greater by the speed of financial innovation and the obscurity and complexity of its practices. This book will discuss the innovative Southeast Florida Regional Climate Compact, and the success of public-private partnerships in planning and adapting to sea level rise, but also the broad disconnect with the cash-and-credit-driven real estate market of South Florida. The book presents an interdisciplinary approach to the understanding of the coupled human (including finance) and natural systems in coastal cities, thus breaking new ground in the approach towards sustainability research and education. The final chapter introduces the social component of resilience which include pre-disaster outreach with and the potential for decision theory to help people understand and manage risk.

Specifically, the book covers the following topics, amongst others: Accounting for Investments; Bills of exchange; Management of Financial Risks; Financial Analysis (including the Financial Analysis Report); Valuation of a business (including the Business Valuation Report) and Money laundering. Accounting for Financial Instruments fills a gap in the current literature for a comprehensive text that brings together relevant accounting concepts and valid regulatory framework, and related procedures regarding the management of financial instruments (investments), which are applicable in the modern business world. Understanding financial risk management allows the reader to comprehend the importance of analysing a business concern. The analysis of the external environment examines factors that impact an entity's operational activities, strategic choices, and influence its opportunities and risks. The analysis of the internal environment applies accounting ratio analysis to an entity's financial statements to examine various elements,

including liquidity, profitability, asset utilisation, investment, working capital management and capital structure. The objective of the book is to provide a fundamental knowledge base for those who are interested in managing financial instruments (investments) or studying banking and finance or those who wish to make financial services, particularly banking and finance, their chosen career. Complex Systems and Sustainability in the Global Auditing, Consulting, and Credit Rating Agency Industries Mar 12 2021

Current and future issues in the global accounting/consulting, business opportunity, and credit rating agency (CRA) industries can have significant multiplier-effects on international trade, sustainable growth, and compliance (as physical phenomena). These three industries are among the most international and human-capital-intensive of all service industries. In these industries, analysis of business models and industry dynamics can provide insights about how human-computer interaction (HCI) and contract theory affect the evolution of financial market ecosystems and cross-border information flows, and how business models, work-allocation mechanisms, and liability allocation can evolve to manage change. An often-overlooked issue is that non-performing loans (NPLs), sustainability, and CRA efficiency can be significantly affected by business processes, corporate strategy, and HCI in industry ecosystems, multinational corporations (MNCs), and economic systems. Complex Systems and Sustainability in the Global Auditing, Consulting, and Credit Rating Agency Industries compares these three industries and introduces theories of public policy and “inter-business” processes. The book links industry structure, complex systems (including networks), behavioral game theory, structural changes, and antitrust problems to sustainability and the efficiency of pollution-remediation systems. The book introduces new “informal algorithms” and business/resource-allocation models that solve social-choice problems, and also contravene “impossibility theorems” that are at the core of modern computer science and mechanism design. This book is essential for professors and masters/PhD-level students and employees (in industry, financial services, research institutes, consulting firms, and government agencies) who are interested in industrial mathematics and theoretical computer science.

Reality and Accounting Jan 28 2020 This book discusses and summarizes the revived interest in reality issues (ontology) within accounting, economics, and the information sciences, with a view to informing scholars from these different disciplines about each other's endeavours in ontological research. Even more importantly, the book aims at familiarizing scholars from various disciplines with an evolutionary approach for examining questions about reality in the social sciences. The book is based on a partly pluralistic approach that assures unity in diversity. Unity, because all existence arises from physical reality; diversity, because emergent properties create biological and social realities that cannot be reduced to physical phenomena. Hence, the book recognizes not only concrete but also abstract entities. It shows, however, that the actualization of these abstract entities requires objectification and concrete manifestation. This pluralistic approach is central to this book. It also is a challenge to those who reject abstract entities as socially real, as well as to those who defend a non-realist position. The major task of this book is to explore proposals towards a uniform ontological basis. This uniform and universal presentation extends beyond traditional ontology (asking 'what is real?') to such questions as 'on which reality level is something real?' and 'in which (temporal and modal) way is it real?'. Such an extended analysis) is relevant to accountants, economists, information scientists, other social scientists as well as philosophers.
