**The Global Findex Database 2017** Apr 15 2021 In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in

collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at [www.worldbank.org/globalindex](http://www.worldbank.org/globalindex).

*Corporate Finance, Innovation, and Strategic Competition* Apr 03 2020 This book analyzes how corporate finance decisions influence strategic competition and innovation of firms in the product market. We consider bank loan financing and venture capital financing. Due to asymmetric information, firms must sign special contracts with banks or venture capitalists. The financial contracts, in turn, determine the competitive strategies of firms in the product market. Firms compete in prices for market shares. In addition to that, firms invest in R&D in order to induce product or process innovation. We show that better access to financial resources improves a firm's market position and leads to a higher rate of innovation. Cash-rich firms may even decide to prey upon financially restricted rivals in order to prevent new market entry or to induce market exit.

This work discusses the issues of data collection and structure, the recursive smoothing for systematic components in excess returns, the choices of event windows, different time horizons for the events, and the consequences of applications of different methodologies. In providing improvement for event studies in corporate finance, and based on the fact that changes in parameters for financial time series are common knowledge, a new alternative methodology is developed to extend the conventional analysis to more robust arguments.

**Structured Finance and Insurance** Jul 31 2022 Praise for Structured Finance & Insurance "More and more each year, the modern corporation must decide what risks to keep and what risks to shed to remain competitive and to maximize its value for the capital employed. Culp explains the theory and practice of risk transfer through either balance sheet mechanism such as structured finance, derivative transactions, or insurance. Equity is expensive and risk transfer is expensive. As understanding grows, and, as a result, costs continue to fall, ART will continue to replace equity as the means to cushion knowable risks. This book enhances our understanding of ART." --Myron S. Scholes, Frank E. Buck Professor of Finance, Emeritus, Graduate School of Business, Stanford University "A must-read for everyone offering structured finance as a business, and arguably even more valuable to any one expected to pay for such service." --Norbert Johanning, Managing Director, DaimlerChrysler Financial Services "Culp's latest book provides a comprehensive account of the most important financing and risk management innovations in both insurance and capital markets. And it does so by fitting these innovative solutions and products into a single, unified theory of financial markets that integrates the once largely separated disciplines of insurance and risk management with the current theory and practice of corporate finance." --Don Chew, Editor, Journal of Applied Corporate Finance (a Morgan Stanley publication) "This exciting book is a comprehensive read on alternative insurance solutions available to corporations. It focuses on the real benefits, economical and practical, of alternatives such as captives, rent-a-captive, and mutuals. An excellent introduction to the very complex field of alternative risk transfer (ART)." --Paul Wohrmann, PhD, Head of the Center of Excellence ART and member of the Executive Management of Global Corporate in Europe, Zurich Financial Services "Structured Finance and Insurance transcends Silos to reach the Enterprise Mountaintop. Culp superbly details integrated, captive, multiple triggers and capital market products, and provides the architectural blueprints for enterprise risk innovation." --Paul Wagner, Director, Risk Management, AGL Resources Inc.

His ability to consistently find undervalued companies has made him one of the world's richest men. Despite many previous books about him, it's rare to find an objective assessment—one that praises him when appropriate, but also recognizes that even Buffett makes mistakes. For instance, is he right to call for higher taxes and an end to earnings guidance? Should Buffett fans copy his avoidance of technology stocks? In this penetrating look at how Buffett thinks, Vahan Janjigian shows readers how to learn from the master's best moves while avoiding strategies that don't apply to small investors. And he explains Buffett's favorite valuation methodology, the discounted cash flow model, and how it can significantly reduce the odds of overpaying for a stock.

**Corporate Debt Restructuring in Emerging Markets** Aug 20 2021 Corporate debt restructurings in the emerging markets have always presented special challenges. Today, as the global economy emerges from the COVID-19 pandemic

and businesses look to pick up the pieces, this is even more true. For many, the financial hangover of the lockdowns and market disruptions linger and threaten their independence, even their survival. This peril is more acute in the emerging and frontier markets. Weaker economic fundamentals and institutional resiliency often intensify the challenge to return to pre-COVID-19 operating levels and financial sustainability. In this context, borrowers invariably must address the imbalance of substantial existing debt with the “new reality” of their business operations and revenues. This book, using case studies, presents a full, detailed narrative of a fictitious troubled bank in an emerging market, with characters, dialogues, and negotiations. It also includes a series of discussion questions with suggested answers, to draw out key issues from the case. In doing so, this initial narrative offers a substantive analysis of the five main phases and principles of a restructuring: (1) pre-restructuring, (2) the decision to restructure, (3) the case set-up, (4) structuring and negotiation, and lastly (5) implementation. In each chapter, the book outlines the main elements of the phases and shows how the elements are applied in practice. The book also presents separate chapters on exogenous shocks (with a focus on the COVID-19 pandemic as an example of such shocks), macroeconomics, and legal issues present in cross-border restructurings. It will be of interest to the international professional financial and legal community, primarily junior-to mid-level financiers, business people, and lawyers.

*Contemporaneous Event Studies in Corporate Finance* Oct 02 2022 Providing a comprehensive overview of event study methodology in the field of corporate finance, this book discusses how traditional methods verify the significance and insignificance of events in statistical sampling, and emphasize possible deviation from the statistics of interest. However, the author illustrates the flaws of

conventional methodology and proposes alternative methods which can be used for a more robust study of estimating normal and abnormal returns. Traditional methods fail to recognize that the importance of an event will also influence the frequency of the occurrence of the event, and consequently they produce subjective sampling results. This book highlights contemporaneous recursive methods which can be used to track down normal returns and avoid arbitrary determination for the estimation and event period. In addition, the author offers an alternative monitoring scheme to identify the events of concern. Addressing a need for more objective sampling methods in corporate finance event studies, this timely book will appeal to students and academics researching financial econometrics and time series analysis, corporate finance and capital markets.
